SUMMARY

- Detail-oriented MBA candidate in Data Science & AI with a strong foundation in data management, data quality validation, and process improvement. Experienced in engineering robust ETL pipelines, profiling datasets, and automating manual workflows using Python and SQL. Adept at creating reports and interactive dashboards to ensure enterprise data is accurate, accessible, and well-governed, aligning with banking and business compliance standards.

Skills and Coursework

Core Data Management: Data Quality Validation, Data Governance, Metadata Documentation, ETL Processes, Data Warehousing, Process Improvement.

Languages & Databases: SQL, Python, Relational Databases, JSON.

Analytics & Reporting: Data Analysis, Power BI, Excel (Macros/Scripts), Tableau, Streamlit Dashboards.

Cloud & Infrastructure: AWS, GCP, Azure (Familiarity), Git, Apache Parquet.

Experience

Technocolabs Softwares Inc. **Data Science Intern** **May 2025 – July 2025**

- Engineered robust ETL data pipelines for 144K+ logistics records, performing rigorous data quality validation to identify and resolve missing values and anomalies.
- Engineered time-series data pipelines, reducing prediction errors to achieve a Test R^2 of 0.98 and MAE of ~38.
- Assisted in process improvement by automating the analysis of 10,000+ support tickets, significantly reducing manual data processing tasks.
- Developed interactive reporting dashboards to visualize key data metrics, enabling business teams to retrieve insights instantly and supporting data-driven decisions.

Personal Projects

- **Holistic SME Credit Scoring Model | Management Project (Ongoing)**
  - Developed a financial data framework integrating structured and unstructured datasets, ensuring strict data governance and accurate metadata documentation.
  - Conducted data profiling and root-cause analysis on financial metrics to improve the integrity and accuracy of a Qualitative Credit Index.
  - Architecting an AI-driven recommendation system that combines financial metrics and sentiment embeddings to match SMEs with sector-specific credit schemes.
- **Data Retrieval & Document Management System**
  - **Metadata Documentation & Data Extraction:** Managed unstructured data pipelines by extracting and cataloging information from PDFs and OCR images into vector databases, ensuring accurate metadata documentation and high-speed data accessibility.
  - **Process Improvement & Automation:** Drove process improvement by automating manual data retrieval workflows and optimizing data flows via API integrations, achieving a 95%+ system uptime.
- **AI Business Analyst Agent**
  - Automated manual data analysis workflows by engineering a backend data pipeline, achieving a 30%+ reduction in manual processing time and supporting continuous process improvement.
  - Documented data flow lineage and deployed analytical dashboards for real-time business performance reporting and analysis
  - Deployed the AI inference service into a production-ready Streamlit web application, seamlessly integrating backend AI models with an interactive UI for business performance analysis.

Achievements

- Semi-Finalist – Grant Thornton National Case Competition (Top 50/4,200+ teams). **2025**
- Third Position – HIBS & AI-xcelerate Case Competition**.** **2024-25**
- CAT 2023 – 99.98 in Quantitative Aptitude **2023**
- Selected from a competitive pool of **1,000** students as one of the **top 15** candidates for distinguished **SEP.** **2020**
- Ranked **209** among **10,000**+ candidates in HPCET. **2017**

Certification

- Machine Learning Crash Course. By Google
- Advanced learning Algorithms. By Deep Learning.
- Supervised Machine Learning .By Deep Learning

Education

- **Indian Institute of Technology Mandi** **2024-2026**
  MBA DS &AI 7.81/10 CGPA
- **Rajiv Gandhi Government Engineering College Kangra** **2017-2021**
  B. Tech Mechanical Engineering 7.78/10 CGPA
- **CAT** **2023** 98.29
