Education

- **Indian Institute of Technology Mandi** **2024-2026**
  MBA DS &AI 7.81/10 CGPA
- **Rajiv Gandhi Government Engineering College Kangra** **2017-2021**
  B. Tech Mechanical Engineering 7.78/10 CGPA
- **K.V Naleti** **2017**
  Class 12 89%
- **CAT** **2023** 98.29

Experience

Technocolabs Softwares Inc. Data Science Intern May 2025 – July 2025

- Developed a Retrieval-Augmented Generation (RAG) based conversational AI system to analyze structured FCD and NCR datasets using natural language queries.
- Implemented dynamic query classification and prompt engineering with **LangChain and NVIDIA LLM** to generate secure, executable Pandas analytics code.
- Integrated **FAISS vector database and HuggingFace embeddings** for semantic document retrieval and contextual summarization.
- Utilized **Apache Parquet** for optimized columnar data storage and high-performance querying.
- Built and deployed an interactive web interface using **Streamlit** for real-time document insights and workflow analytics.

Personal Projects

- **Retrieval-Augmented Generation (RAG) System for PDF Question Answering**
  - Built a **Lang Graph-orchestrated multi-LLM RAG agent** with **FAISS** for semantic search across PDFs, text files, and OCR-extracted images.
  - Integrated **Groq (Llama 3.1), GPT-4o, and Gemini 1.5 Pro** with dynamic model selection, tool routing, and fallback between documents and web search.
  - Enhanced response reliability by integrating **external web search**, **retrieval grounding**, and **memory-aware conversations**.
- **AI Business Analyst Agent**
  - Built an **LLM-powered** analytics agent converting natural language queries into automated sales and marketing insights.
  - Executed intent classification and multi-dataset feature engineering pipelines.
  - Deployed an interactive Stream lit dashboard for automated business performance analysis.
- **Stock Price Prediction (LSTM + Sentiment Analysis)**
  - Developed an **LSTM-based deep learning model** for next-day stock price prediction using **10 years of historical data**..
  - Created a **hybrid predictive architecture** integrating financial indicators and NLP-based sentiment scores.
  - Applied end-to-end ML workflow including **data preprocessing, model training, evaluation, and performance optimization**. Achieved **R^2 score of 0.87.**
- **Holistic SME Credit Scoring Model | Management Project (Ongoing**
  - Designing a **holistic SME creditworthiness and credit risk framework** by integrating **financial data (Prowess IQ)** with **qualitative and real-time sentiment analysis** to assess business stability and market perception.
  - **Conducted in-depth SME interviews to identify gaps in traditional bank lending models, translating non**-financial factors into a **Qualitative Credit Index (QCI)**.
  - Proposed an **AI-driven credit evaluation platform** combining **financial metrics, sentiment-based insights, and sector-specific government scheme recommendations** to improve SME credit accessibility.

Achievements

- Semi-Finalist – Grant Thornton National Case Competition (Top 50/4,200+ teams). **2025**
- Third Position – HIBS & AI-xcelerate Case Competition**.** **2024-25**
- CAT 2023 – 99.98 in Quantitative Aptitude **2023**
- Selected from a competitive pool of **1,000** students as one of the **top 15** candidates for distinguished **SEP.** **2020**
- Ranked **209** among **10,000**+ candidates in HPCET. **2017**

Positions of Responsibility

- Organized IIT Mandi HST 2024, hosting 100+ startups and investors. **NOV 2024**
- House Captain (2 Years), led 150-member team and executed large-scale events. **2015-2017**

Skills and Coursework

Data Science & Machine Learning: Python, SQL, LSTM ,Transformer, NLP, Sentiment Analysis.
Statistical Analysis: Regression Analysis, Hypothesis Testing, Forecasting Techniques
Data Analysis & Visualization: Excel, Power BI.
Generative AI & LLM Stack: Lang Chain, Lang Graph, Lang Smith, RAG, FAISS, Hugging Face Embedding.
